PROJECTS

Online Library Management System

Online Library Management System – Frontend A responsive web application designed to simplify the management of library operations. Built using HTML, CSS, Bootstrap for layout and styling, and JavaScript and React for dynamic functionality and user interface. Key features include book listing, search and filter options, user registration/login, issue/return tracking, and category-wise book browsing. The UI ensures an intuitive experience for both librarians and users, with real-time updates and efficient navigation across the system.
